### HISTORIC POLICY MOMENT

---

It is not often we get to observe monumental shifts in economic policy outside of the United States. By design, the American political system allows for frequent voter referendums on the state of economic affairs. Political power shifts and the resultant economic policy changes are fairly common here at home, with the most recent shift (from anti-growth to pro-growth policies) coming from the 2016 Presidential Election.

On a global scale, economic policy shifts move at a much more glacial pace. Most countries' economic fate is largely influenced by U.S. policies, specifically monetary policy. But domestic regime changes leading to monumental economic policy shifts are far less frequent in countries from South America to Europe to Asia.

We are on the verge of a historic policy moment outside of the U.S., and it's happening in the United Kingdom.

The U.K. Parliament has passed Boris Johnson's call for a snap election, putting the Brexit decision back into the hands of British voters. The election date is December 12th, when the electorate will get to choose their fate. Having already voted for Brexit once, we expect Johnson will prevail in his long fight to pull Britain out of the EU in accord with the fateful 2016 referendum in which Leavers outnumbered Remainers by a modest margin.

A pro-Brexit election outcome would mark a monumental decision on global economic policy. If voters choose growth in Britain, we expect a bilateral U.S.-U.K. free trade agreement to quickly follow. Capital will flow into the U.K., especially fleeing from high tax and regulatory burdens in European Union countries.

It should come as no surprise that capital is lining up to escape failed economic policies across Europe. Mainstream economists continue to believe Europe has a demand problem. According to Citigroup, "European households are saving more. That's bad news for aggregate demand in a region where inflation expectations are already at epic lows, while there's diminished monetary firepower to shore up economic growth."

This analysis is wrong. Europe does not have a savings problems. Instead, Europe has a growth problem, namely a lack of pro-growth fiscal, monetary and regulatory policies to spur supply, not demand. Britain's

snap election could mark a historic moment of choosing growth over the failed “demand-side” policies plaguing Europe.

December 12 marks a truly historic moment in global economic policy. We get to observe in real time a country’s electorate choosing the fate of their economic policy set and, therefore, their prosperity. The voters’ decision will have significant consequences for the path of global economic policies. A Brexit result could very well usher in a pro-growth policy movement that reverberates across the European Union and beyond.

### Economic Policy Path is a Choice

**Fixed Income**

---

Bonds are an asset class that does well in a deflationary policy environment (Low Growth & Strong Currency)

We have long said the Treasury bond bubble will pop again as it did from May2013-Jan2014 when long term Treasury bonds fell 18%. With voters choosing Trump's pro-growth agenda to ignite growth, we believe the this is even more likely. Treasury bond prices are at risk to fall 30-50%, and we expect any moves higher in bond prices (lower in yields) to be short-lived. Since most other bonds price off of Treasury yields, fixed income in general is a risky asset class.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes

### Commodities

---

A change in the price of gold is a change in the value of the currency. When gold rises, the currency's value falls and vice versa. Commodities are an asset class that does well when the currency is weak.

If growth is slowing while the currency weakens, there is stagflation. Own precious metals.

If growth is accelerating while the currency weakens, there is an inflationary expansion. Own agriculture, industrial and energy commodities.

Commodities suffered heavy losses in the strong US Dollar environment 2012-2015. In 2016 Dollar weakness was caused by election uncertainty and commodities rallied. That weak Dollar trend was reversed by Election2016. The demand for transactional and asset based Dollars will rise if Trump's pro-growth policies are implemented and fall if his policy agenda fails. Gold's recent decline back below \$1,300/oz is a confirmation of better policy and rising growth rates. Capital is beginning to leave safe haven asset classes as policy uncertainty diminishes.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes

### Real Estate

---

Real Estate is an asset class that performs well when growth is accelerating. When rising growth is coupled with a strong currency, own real estate tied to business activity (like commercial REITS). When rising growth is coupled with a weak currency, own real estate tied to commodities (farmland).

Commercial RE will be helped by improving real economic growth. RE properties leveraged to businesses & economic growth are preferred under pro-growth US policies.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/ Loss	Policy Notes

**US Equity**

---

We have been waiting for a 1980s/90s type of policy driven equity bull market for sixteen years. The 2014 midterm House/Senate/gubernatorial election shifts put us on the path as pro-growth candidates propelled the GOP to majorities. It was a repudiation of anti-growth economic policies and a big step toward a Reagan/Clinton type of equity bull market. Despite the voters' growth signal, Obama doubled down on his tax/spend/regulatory (EPA) agendas in 2015 causing stocks to be range bound and volatile. As 2016 began, policy uncertainty ahead of November's elections became the biggest threat to equities. The ebb and flow of the presidential political season moved markets in both directions as investors waited to learn which policy theme would prevail in November – growth vs. redistribution. Voters decisively made their choice in Election2016, and growth won. Trump's pro-growth policy agenda beat Hillary's anti-growth policy agenda in landslide fashion. Republicans retained control of the Senate, House and increased their control of governorships by three. The policy stage is now set for Trump and Congress to keep delivering pro-growth tax, regulatory and monetary policies. As they do, a bull market in U.S. equities will ignite to rival the 1980s/90s

## POLICY MAP

Growth decreased versus last week (1.44 to 1.42): Despite pro-growth tax and regulatory policy improvements since 2016, growth has tipped into negative territory over fears of a 2008-style, deflationary monetary policy mistake.

Value of US\$ was weakened versus last week (1.44 to 1.46): Dollar had been stable between gold \$1,300-\$1,375/oz, and strengthened to \$1,230/oz, giving the Fed a strong Dollar signal to pause rate hikes until economic and market data calm down. Recent Dollar weakness above \$1,400 is concerning but likely has some temporary geopolitical causes like Iran.

## BOND YIELD COMPONENT ANALYSIS

**Nominal Yield: 1.73% (-4%)   Inflation Expectation Component: 1.59% (-4%)   Real Growth Component: 0.14% (-7%)**

Real growth expectations embedded in the Treasury bond market have been dislocated from equity markets in 2019. Some of the collapse in real growth has been caused by global bond market dynamics with negative interest rates across the globe. But now the risk of a serious deterioration in U.S. policy is also weighing on growth. With trade policy still uncertain, the Fed disappointed with only a 25bp cut at their last meeting. For now a Q42018-type deflationary policy mistake seems unlikely..
