BIGGEST THREAT

In 2019 the S&P500 has increased 23% while betting market odds of Trump winning the 2020 Presidential Election have increased 40% (from 29 in January to 41 today). As firm believers that government economic policy determines asset prices, we do not see this as a coincidence.

This re-election odds chart is derived from real money betting sites Betfair.com and PredictIt.com. Studies find that political prediction (betting) markets tend to be better at predicting elections than polls for many reasons. For example, bettors take into account important factors besides polls and, unlike pundits, people in betting markets put their money where their mouths are.

Bottom line: Rising odds of a continuation of Trump's pro-growth economic policies are fueling optimism and investment in U.S. equities.

But the opposite can also be true. If an antigrowth set of policies become the favorite to win next year's election, then stocks would begin pricing in that reality right away. The biggest threat to the current U.S. economic expansion and stock market performance is a Democratic Presidential candidate winning on a platform of bad economic policies. In this context, Elizabeth Warren is the biggest threat to American prosperity.

According to Art Laffer, Warren's tax policies will lead to the "deepest economic decline ever." Laffer believes, "We will go into the deepest decline ever if her full program were implemented. Warren's tax plan was the exact formula used in the 1930s when the Smoot-Hawley Tariff Act was signed into law and the economy started collapsing. In 1932, the tax rate was raised from 25% to 63% and that increase of the death tax and the

POLICY BASED INVESTING

Tuesday, November 12, 2019

personal income tax rate resulted in the biggest, deepest decline in U.S. history. I am really very afraid that all of that will occur again as a consequence of Warren's policies"

Among a myriad of higher tax marginal tax rates and increased regulatory burdens, Warren's ideas on capital gains taxation are especially frightening. Warren wants to tax capital gains at a high rate, even if the gains are only on paper. That's correct, she wants to tax <u>unrealized</u> capital gains.

According to research by Dan Mitchell,

"Under current law, long-term capital gains are taxed at rates up to 20%—plus a 3.8% ObamaCare surcharge on investment income—only after the asset is sold. Mr. Wyden calls this a loophole. ...Mr. Wyden...proposes an annual "mark to market" scheme... As an asset rises in value, its owners would pay tax each year on the incremental gain. This would create an enormous new accounting burden. Mr. Wyden may say that his mark-to-market rule will apply only to the top 1% or 0.1%, but it would still be a bonanza for tax attorneys. How will people in the top 2% know whether they've passed the threshold, and how far will they go to avoid it? ...Mr. Wyden's plan would tax gains that exist merely on paper. ... And what about illiquid investments, such as private companies or real estate? As with Ms. Warren's suggested wealth tax, no one knows how Mr. Wyden would go about valuing them. ...Would the owner of an apartment building be asked to revalue it every year? Will an art investor be told to mark that Picasso to market? Good luck. Under the Wyden – now Warren – plan, you can have illusory gains that only reflect inflation, and then you can get taxed on those illusory gains even if you don't actually get them because you haven't sold the asset."

If investors want a guarantee of when the next stock market crash and economic recession will occur, look no further than the policies of Elizabeth Warren. All investors need to begin following the 2020 Presidential Election betting odds right away. We don't think Warren or any other candidate espousing such poor policies can win 2020, but we are making sure our opinions are backed by real world market data.

ALLOCATOR

Fixed Income

Bonds are an asset class that does well in a deflationary policy environment (Low Growth & Strong Currency)

We have long said the Treasury bond bubble will pop again as it did from May2013-Jan2014 when long term Treasury bonds fell 18%. With voters choosing Trump's pro-growth agenda to ignite growth, we believe the this is even more likely. Treasury bond prices are at risk to fall 30-50%, and we expect any moves higher in bond prices (lower in yields) to be short-lived. Since most other bonds price off of Treasury yields, fixed income in general is a risky asset class.

ALLOCATOR

Commodities

A change in the price of gold is a change in the value of the currency. When gold rises, the currency's value falls and vice versa. Commodities are an asset class that does well when the currency is weak.

If growth is slowing while the currency weakens, there is stagflation. Own precious metals.

If growth is accelerating while the currency weakens, there is an inflationary expansion. Own agriculture, industrial and energy commodities.

Commodities suffered heavy losses in the strong US Dollar environment 2012-2015. In 2016 Dollar weakness was caused by election uncertainty and commodities rallied. That weak Dollar trend was reversed by Election2016. The demand for transactional and asset based Dollars will rise if Trump's pro-growth policies are implemented and fall if his policy agenda fails. Gold's recent decline back below \$1,300/oz is a confirmation of better policy and rising growth rates. Capital is beginning to leave safe haven asset classes as policy uncertainty diminishes.

Asset	ETF	Action Red Sell/G		Current Price	% Gain/Loss	Policy Notes

ALLOCATOR

Real Estate

Real Estate is an asset class that performs well when growth is accelerating. When rising growth is coupled with a strong currency, own real estate tied to business activity (like commercial REITS). When rising growth is coupled with a weak currency, own real estate tied to commodities (farmland).

Commercial RE will be helped by improving real economic growth. RE properties leveraged to businesses & economic growth are preferred under pro-growth US policies.

US Equity

We have been waiting for a 1980s/90s type of policy driven equity bull market for sixteen years. The 2014 midterm House/Senate/gubernatorial election shifts put us on the path as pro-growth candidates propelled the GOP to majorities. It was a repudiation of anti-growth economic policies and a big step toward a Reagan/Clinton type of equity bull market. Despite the voters' growth signal, Obama doubled down on his tax/spend/regulatory (EPA) agendas in 2015 causing stocks to be range bound and volatile. As 2016 began, policy uncertainty ahead of November's elections became the biggest threat to equities. The ebb and flow of the presidential political season moved markets in both directions as investors waited to learn which policy theme would prevail in November – growth vs. redistribution. Voters decisively made their choice in Election2016, and growth won. Trump's pro-growth policy agenda beat Hillary's anti-growth policy agenda in landslide fashion. Republicans retained control of the Senate, House and increased their control of governorships by three. The policy stage is now set for Trump and Congress to keep delivering pro-growth tax, regulatory and monetary policies. As they do, a bull market in U.S. equities will ignite to rival the 1980s/90s

POLICY MAP

Growth decreased versus last week (1.42 to 1.35): Despite pro-growth tax and regulatory policy improvements since 2016, growth has tipped into negative territory over fears of a 2008-style, deflationary monetary policy mistake.

Value of US\$ strengthened versus last week (1.46 to 1.44): Dollar had been stable between gold \$1,300-\$1,375/oz, and strengthened to \$1,230/oz. giving the Fed a strong Dollar signal to pause rate hikes until economic and market data calm down. Recent Dollar weakness above \$1,400 is concerning but likely has some temporary geopolitical causes like Iran.

BOND YIELD COMPONENT ANALYSIS

Nominal Yield: 1.94% (+12%) Inflation Expectation Component: 1.71% (+8%) Real Growth Component: 0.23% (+64%)

Real growth expectations embedded in the Treasury bond market have been dislocated from equity markets in 2019. Some of the collapse in real growth has been caused by global bond market dynamics with negative interest rates across the globe. But now the risk of a serious deterioration in U.S. policy is also weighing on growth. With trade policy still uncertain, the Fed disappointed with only a 25bp cut at their last meeting. For now a Q42018-type deflationary policy mistake seems unlikely..
