
A LOOK AHEAD

Looking ahead to 2020 we see one critical issue moving markets, the Presidential Election. We are firm believers in Jude Wanniski's political economic model that shows voters choose what is in their best interest. In aggregate the electorate will choose growth policies if such options are presented on the political menu.

Voters know what is on Trump's policy menu. He is promising more of the same: marginal tax rate reductions, more easing of regulatory burdens and bi-lateral free trade deals with "friendly" countries. One big advantage policy savvy investors can have in 2020 is staying informed about what policies Democratic Presidential candidates are proposing. Can they offer some versions of growth policies to attract voter interest? So far that answer is a resounding no.

Elizabeth Warren's betting market odds of winning the Democratic primary have collapsed from 52% to 17% since early October on the heels of her far left economic policy agenda. It seems that even the Democratic voter base doesn't have a strong appetite for excessive taxation of wealth, capital and labor. The cornerstone of Warren's proposed tax plan is a reversal of the 2017 marginal tax rates cuts for personal and corporate incomes.

Joe Biden has taken the lead in betting markets with a 21% chance to win the Democratic nomination. Last week Biden revealed more about his tax policy agenda. While less harsh than Warren's plans, Biden offers little for economic growth enthusiasts to cheer. Overall Biden has proposed \$3.2 trillion in tax increases. While this total is less than some of his Democratic opponents, it is more than enough to turn the economy into recession and cause a significant stock market collapse. Here is a list of some anti-growth ideas Biden wants to implement:

- Increase corporate tax rate from 21% to 28%
- Increase the top individual tax rate to 39.6% – its level before the 2017 Republican tax cuts
- Eliminating stepped up basis so that individuals can no longer pass on appreciated property without having to pay tax on the gain

- Double Gilti tax to 21%, a minimum tax on foreign profits that became law as part of the 2017 Republican tax overhaul
- Increase long term capital gains tax rate from 23.8% to 43.4%

Biden's tax policy platform is a political loser, but there is always the threat that such an agenda gets elected. We expect that U.S. stocks will have at least one major bout of tax hike fear in 2020 leading to a decline of 10-15%. Ultimately we think Trump's pro-growth policy agenda will prevail. Unless the Democrats start proposing some pro-growth tax ideas, next November's political contest won't even be close.

ALLOCATOR

Fixed Income

Bonds are an asset class that does well in a deflationary policy environment (Low Growth & Strong Currency)

We have long said the Treasury bond bubble will pop again as it did from May2013-Jan2014 when long term Treasury bonds fell 18%. With voters choosing Trump's pro-growth agenda to ignite growth, we believe the this is even more likely. Treasury bond prices are at risk to fall 30-50%, and we expect any moves higher in bond prices (lower in yields) to be short-lived. Since most other bonds price off of Treasury yields, fixed income in general is a risky asset class.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes

ALLOCATOR

Commodities

A change in the price of gold is a change in the value of the currency. When gold rises, the currency's value falls and vice versa. Commodities are an asset class that does well when the currency is weak.

If growth is slowing while the currency weakens, there is stagflation. Own precious metals.

If growth is accelerating while the currency weakens, there is an inflationary expansion. Own agriculture, industrial and energy commodities.

Commodities suffered heavy losses in the strong US Dollar environment 2012-2015. In 2016 Dollar weakness was caused by election uncertainty and commodities rallied. That weak Dollar trend was reversed by Election2016. The demand for transactional and asset based Dollars will rise if Trump's pro-growth policies are implemented and fall if his policy agenda fails. Gold's recent decline back below \$1,300/oz is a confirmation of better policy and rising growth rates. Capital is beginning to leave safe haven asset classes as policy uncertainty diminishes.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes

Base Metals	DBB	6/17/2011	\$23.00	\$14.97	-34.9%	

ALLOCATOR

Real Estate

Real Estate is an asset class that performs well when growth is accelerating. When rising growth is coupled with a strong currency, own real estate tied to business activity (like commercial REITS). When rising growth is coupled with a weak currency, own real estate tied to commodities (farmland).

Commercial RE will be helped by improving real economic growth. RE properties leveraged to businesses & economic growth are preferred under pro-growth US policies.

ALLOCATOR

US Equity

We have been waiting for a 1980s/90s type of policy driven equity bull market for sixteen years. The 2014 midterm House/Senate/gubernatorial election shifts put us on the path as pro-growth candidates propelled the GOP to majorities. It was a repudiation of anti-growth economic policies and a big step toward a Reagan/Clinton type of equity bull market. Despite the voters' growth signal, Obama doubled down on his tax/spend/regulatory (EPA) agendas in 2015 causing stocks to be range bound and volatile. As 2016 began, policy uncertainty ahead of November's elections became the biggest threat to equities. The ebb and flow of the presidential political season moved markets in both directions as investors waited to learn which policy theme would prevail in November – growth vs. redistribution. Voters decisively made their choice in Election2016, and growth won. Trump's pro-growth policy agenda beat Hillary's anti-growth policy agenda in landslide fashion. Republicans retained control of the Senate, House and increased their control of governorships by three. The policy stage is now set for Trump and Congress to keep delivering pro-growth tax, regulatory and monetary policies. As they do, a bull market in U.S. equities will ignite to rival the 1980s/90s

POLICY MAP

Growth increased versus last week (1.34 to 1.36): Despite pro-growth tax and regulatory policy improvements since 2016, growth has tipped into negative territory over fears of a 2008-style, deflationary monetary policy mistake.

Value of US\$ unchanged versus last week (1.41 to 1.41): Dollar had been stable between gold \$1,300-\$1,375/oz, and strengthened to \$1,230/oz. giving the Fed a strong Dollar signal to pause rate hikes until economic and market data calm down. Recent Dollar weakness above \$1,400 is concerning but likely has some temporary geopolitical causes like Iran.

BOND YIELD COMPONENT ANALYSIS

Nominal Yield: 1.80% (+1%) Inflation Expectation Component: 1.67% (+4%) Real Growth Component: 0.13% (-24%)

Real growth expectations embedded in the Treasury bond market have been dislocated from equity markets in 2019. Some of the collapse in real growth has been caused by global bond market dynamics with negative interest rates across the globe. But now the risk of a serious deterioration in U.S. policy is also weighing on growth. With trade policy still uncertain, the Fed disappointed with only a 25bp cut at their last meeting. For now a Q42018-type deflationary policy mistake seems unlikely..
