

## GOLD SIGNAL

The most important asset we monitor is the U.S. Dollar price of gold. Watching gold allows us to observe if the demand for Dollars is outpacing supply (Strong Dollar) or if the supply of Dollars is outpacing demand (Weak Dollar). While the relationship is often volatile over shorter time periods, the long term trend of gold prices gives us a lot of information about what asset classes to own. This happens because weak or strong Dollar trends tend to persist for years and sometimes even decades as a result of underlying economic policies.

Between June 2016 and June 2019 the Dollar price of gold was rangebound between roughly \$1,200-\$1,375, as shown in the yellow shaded box below. This “stable Dollar” was consistent with pro-growth economic policies from the Trump administration. Global capital rushed into the U.S. chasing the expected excess returns on capital from lower marginal tax rates and lower regulatory burdens. Strong Dollar assets like U.S. equities dominated weak Dollar assets like commodities.

In June 2019 the “Footprints of Policy” shifted. Gold moved decisively above \$1,375 and has traded even higher since. The supply of Dollars is outpacing the demand for Dollars, causing a weak Dollar environment not seen in years. This is an extremely important policy shift that warrants careful monitoring.

We assess two possible scenarios causing this recent shift.

1. The weak Dollar could be the result of a dramatic worsening of domestic economic policies. Global investors could be shunning Dollar investments and collapsing Dollar demand in a anticipation of a radical shift towards anti-growth policies

in 2020. As Bernie Sanders and his dangerous economic agenda surge in political betting markets, we can understand how the Dollar could weaken on fears about the next administration.

2. Since we don't believe that U.S. voters will choose an anti-growth agenda in 2020, another explanation for the recent weak Dollar is geopolitical. Rising tensions with Iran cause a flight to safe-havens like gold. The timeline matches well, as gold's most rapid advance began after the May 8, 2019 announcement that the U.S. would withdraw from the Iran nuclear agreement. Recent military strikes from both sides added to the uncertainty and sent gold prices surging to \$1,600 last week.

Bottom line: We have entered a weak Dollar moment. It is crucial to determine if this trend is durable or temporary. For now, we believe the weak Dollar is temporary. We do not think Election 2020 will usher in an anti-growth, weak Dollar policy set. We also do not think that geopolitical tensions with Iran will continue to escalate. That being said, we cannot ignore the market. If the Dollar continues to remain weak in gold terms then a longer term shift from strong to weak Dollar assets will result. The multi-year bear market in commodity prices and commodity linked assets could be over.

## ALLOCATOR

### Fixed Income

Bonds are an asset class that does well in a deflationary policy environment (Low Growth & Strong Currency)

We have long said the Treasury bond bubble will pop again as it did from May2013-Jan2014 when long term Treasury bonds fell 18%. With voters choosing Trump's pro-growth agenda to ignite growth, we believe the this is even more likely. Treasury bond prices are at risk to fall 30-50%, and we expect any moves higher in bond prices (lower in yields) to be short-lived. Since most other bonds price off of Treasury yields, fixed income in general is a risky asset class.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes
Investment Grade	LQD	9/9/2016	\$119.00	\$128.70	8.2%	
Aggregate Bond	AGG	9/9/2016	\$109.00	\$112.98	3.7%

High Yield	HYG	4/12/2016	\$77.00	\$88.39	14.8%	Act more like equities than bonds, benefit from improving growth

## ALLOCATOR

## Commodities

A change in the price of gold is a change in the value of the currency. When gold rises, the currency's value falls and vice versa. Commodities are an asset class that does well when the currency is weak.

If growth is slowing while the currency weakens, there is stagflation. Own precious metals.

If growth is accelerating while the currency weakens, there is an inflationary expansion. Own agriculture, industrial and energy commodities.

Commodities suffered heavy losses in the strong US Dollar environment 2012-2015. In 2016 Dollar weakness was caused by election uncertainty and commodities rallied. That weak Dollar trend was reversed by Election2016. The demand for transactional and asset based Dollars will rise if Trump's pro-growth policies are implemented and fall if his policy agenda fails. Gold's recent decline back below \$1,300/oz is a confirmation of better policy and rising growth rates. Capital is beginning to leave safe haven asset classes as policy uncertainty diminishes.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes

### Real Estate

---

Real Estate is an asset class that performs well when growth is accelerating. When rising growth is coupled with a strong currency, own real estate tied to business activity (like commercial REITS). When rising growth is coupled with a weak currency, own real estate tied to commodities (farmland).

Commercial RE will be helped by improving real economic growth. RE properties leveraged to businesses & economic growth are preferred under pro-growth US policies.

---

We have been waiting for a 1980s/90s type of policy driven equity bull market for sixteen years. The 2014 midterm House/Senate/gubernatorial election shifts put us on the path as pro-growth candidates propelled the GOP to majorities. It was a repudiation of anti-growth economic policies and a big step toward a Reagan/Clinton type of equity bull market. Despite the voters' growth signal, Obama doubled down on his tax/spend/regulatory (EPA) agendas in 2015 causing stocks to be range bound and volatile. As 2016 began, policy uncertainty ahead of November's elections became the biggest threat to equities. The ebb and flow of the presidential political season moved markets in both directions as investors waited to learn which policy theme would prevail in November – growth vs. redistribution. Voters decisively made their choice in Election2016, and growth won. Trump's pro-growth policy agenda beat Hillary's anti-growth policy agenda in landslide fashion. Republicans retained control of the Senate, House and increased their control of governorships by three. The policy stage is now set for Trump and Congress to keep delivering pro-growth tax, regulatory and monetary policies. As they do, a bull market in U.S. equities will ignite to rival the 1980s/90s

## POLICY MAP

Growth increased versus last week (1.63 to 1.71): Despite pro-growth tax and regulatory policy improvements since 2016, growth has tipped into negative territory over fears of a 2008-style, deflationary monetary policy mistake.

Value of US\$ unchanged versus last week (1.33 to 1.33): Dollar had been stable between gold \$1,300-\$1,375/oz, and strengthened to \$1,230/oz. giving the Fed a strong Dollar signal to pause rate hikes until economic and market data calm down. Recent Dollar weakness above \$1,400 is concerning but likely has some temporary geopolitical causes like Iran.

## BOND YIELD COMPONENT ANALYSIS

**Nominal Yield: 1.83% (+2%)   Inflation Expectation Component: 1.76% (-1%)   Real Growth Component: 0.07% (+133%)**

Real growth expectations embedded in the Treasury bond market have been dislocated from equity markets in 2019. Some of the collapse in real growth has been caused by global bond market dynamics with negative interest rates across the globe. But now the risk of a serious deterioration in U.S. policy is also weighing on growth. With trade policy still uncertain, the Fed disappointed with only a 25bp cut at their last meeting. For now a Q42018-type deflationary policy mistake seems unlikely..
