## STABLE DOLLAR

---

The Federal Reserve meets on Tuesday and Wednesday this week. With monetary policy currently being the single most important policy driver for all asset classes, it will be very important to assess what message Powell delivers to markets. As we noted recently,

“The Fed’s shift in monetary policy over the past few weeks is a big deal. Remember, the recent shock and credit market panics were all about the Fed being too arrogant about the future path of policy. After the mini-2008 style panic that ensued from October through December, the Fed seemingly has learned its lesson. They appear unwilling to make the same mistake of so many FOMCs before them. They are listening to market “Footprints of Policy” and adjusting their policy course accordingly. 2019 should be a binary year for policy and asset class performance. Either the Fed will stay true to the recent shift towards data driven policy and risk assets like stocks will perform well, or the Fed will revert to failed Phillips curve arrogance and safe haven assets like bonds and gold will perform well.”

There is a reason we have been talking about the same monetary policy story for weeks, even months. It is because monetary policy has become the most important policy driver. Tax policy remains pro-growth. Regulatory policy remains pro-growth. China trade policy, while still undecided, is not yet anti-growth. But as the October-December 2018 deflation panic proved, monetary policy is on the margin. Investors who are on the correct side of the Fed’s inflationary or deflationary mismatch will be rewarded.

We lean optimistically that the Powell Fed has received sufficient warning from capital markets to avoid a deflationary mismatch. Fed funds futures markets are now pricing in an 80% chance that the Federal reserve does not increase interest in rates in 2019. If the Fed acts consistent with those market expectation, then risk assets like equities should continue to perform well (the S&P500 has rallied 12% since Christmas Eve.) But the bar is now set quite high for a deflationary mistake. Even talk about just one more rate hike in 2019 would be a surprise to markets and a signal investors should shift assets into safe havens like bonds and gold.

## POLICY BASED INVESTING

by Russell Redenbaugh & James Juliano

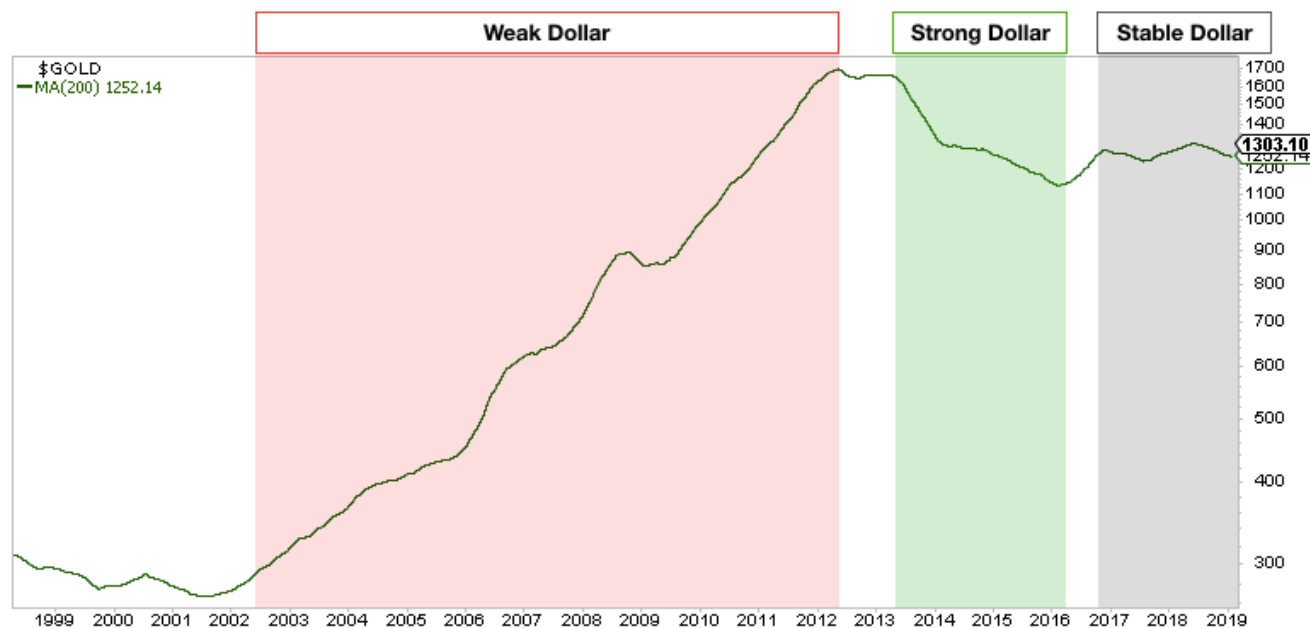

Monday, January 28, 2019

Remember, it's not crucial to be the first investor to correctly identify if the Fed is making an inflationary or deflationary mistake. But it is crucial to allocate assets quickly and correctly once the monetary policy trend is in place. As history proves, Fed policy mismatches can last many years. In fact, the past several years have in some ways been a goldilocks period of monetary policy. Many forget that in just the past seventeen years there have been massive Dollar inflations and deflations that dwarf the Dollar moves since 2016.

In an effort to reduce signal noise, the chart below shows the average annual price of gold. From 2002 to 2012 the average annual Dollar price of gold rose from \$290/oz to \$1,690/oz, a 480% increase and one of the most dramatic weak Dollar periods in history. During that period owning commodities and commodity linked assets was the best way to preserve and grow wealth.

From 2013 to 2016 the average annual Dollar price of gold declined from \$1690/oz to \$1,130/oz, a 33% decrease in just three years. During that strong Dollar period owning commodities and commodity linked assets was the best way to lose wealth while pro-growth assets like stocks performed best.

Since 2016 the average annual Dollar price of gold has been extremely stable near \$1,300/oz. For all the critique and blame the Fed rightfully receives given its historic track record, over the past two years the Dollar price of gold has been remarkably stable. Intentional or not, the data are clear.

## ALLOCATOR

### Fixed Income

Bonds are an asset class that does well in a deflationary policy environment (Low Growth & Strong Currency)

We have long said the Treasury bond bubble will pop again as it did from May2013-Jan2014 when long term Treasury bonds fell 18%. With voters choosing Trump's pro-growth agenda to ignite growth, we believe the this is even more likely. Treasury bond prices are at risk to fall 30-50%, and we expect any moves higher in bond prices (lower in yields) to be short-lived. Since most other bonds price off of Treasury yields, fixed income in general is a risky asset class.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes
Investment Grade	LQD	9/9/2016	\$119.00	\$115.02	-3.3%	
Aggregate Bond	AGG	9/9/2016	\$109.00	\$106.63	-2.2%	2017 rise in Treasury bond prices (decline in yields) due to inflation expectation falling while growth expectation flat. This is a positive combination for future economic growth. Bonds remain a risky asset class that could decline 30-50% as real growth normalizes higher.
Municipal	MUB	9/9/2016	\$111.00	\$108.97	-1.8%	
TIPS	TIP	9/9/2016	\$114.00	\$109.54	-3.9%	
Extended Duration	EDV	9/9/2016	\$128.00	\$112.07	-12.4%	
US Treasury 3-7 yr	IEI	9/9/2016	\$124.00	\$121.19	-2.3%	
US Treasury 7-10 yr	IEF	9/9/2016	\$109.00	\$103.86	-4.7%	
US Treasury 20+ yr	TLT	9/9/2016	\$133.00	\$120.41	-9.5%	
International Total Bond	BNDX	9/9/2016	\$54.40	\$54.58	0.3%	
High Yield	HYG	4/12/2016	\$77.00	\$84.29	9.5%	Act more like equities than bonds, benefit from improving growth

---

---

## ALLOCATOR

---

---

### Commodities

---

---

A change in the price of gold is a change in the value of the currency. When gold rises, the currency's value falls and vice versa. Commodities are an asset class that does well when the currency is weak.

If growth is slowing while the currency weakens, there is stagflation. Own precious metals.

If growth is accelerating while the currency weakens, there is an inflationary expansion. Own agriculture, industrial and energy commodities.

Commodities suffered heavy losses in the strong US Dollar environment 2012-2015. In 2016 Dollar weakness was caused by election uncertainty and commodities rallied. That weak Dollar trend was reversed by Election2016. The demand for transactional and asset based Dollars will rise if Trump's pro-growth policies are implemented and fall if his policy agenda fails. Gold's recent decline back below \$1,300/oz is a confirmation of better policy and rising growth rates. Capital is beginning to leave safe haven asset classes as policy uncertainty diminishes.

Asset	ETF	Action Date Red Sell/Green Buy		Current Price	% Gain/Loss	Policy Notes
Gold	GLD	10/2/2017	\$120.77	\$123.26	2.1%	
Silver	SLV	10/2/2017	\$15.67	\$14.80	-5.6%	
Energy	DBE	8/13/2014	\$28.97	\$13.49	-53.4%	
Oil	USO	7/30/2014	\$37.00	\$10.95	-70.4%	
Agriculture	DBA	9/13/2011	\$32.50	\$17.07	-47.5%	
Broad Comm. Index	GSG	8/5/2011	\$33.00	\$14.93	-54.8%	
Base Metals	DBB	6/17/2011	\$23.00	\$16.01	-30.4%	

---

## ALLOCATOR

---

### Real Estate

---

Real Estate is an asset class that performs well when growth is accelerating. When rising growth is coupled with a strong currency, own real estate tied to business activity (like commercial REITS). When rising growth is coupled with a weak currency, own real estate tied to commodities (farmland).

Commercial RE will be helped by improving real economic growth. RE properties leveraged to businesses & economic growth are preferred under pro-growth US policies.

Asset	ETF	Action Date Red Sell/Green Buy	Current Price	% Gain/ Loss	Policy Notes	
Residential	REZ	12/21/2016	\$61.00	\$67.33	10.4%	Real estate assets have declined as higher interest rates expectations lower the perceived attractiveness of housing demand and real estate's dividend yield.
Building/Construction	ITB	12/21/2016	\$28.00	\$32.66	16.6%	
Mortgage REIT	REM	4/1/2016	\$35.00	\$43.07	23.1%	
REIT	VNQ	3/7/2016	\$75.50	\$81.25	7.6%

**US Equity**

---

We have been waiting for a 1980s/90s type of policy driven equity bull market for sixteen years. The 2014 midterm House/Senate/gubernatorial election shifts put us on the path as pro-growth candidates propelled the GOP to majorities. It was a repudiation of anti-growth economic policies and a big step toward a Reagan/Clinton type of equity bull market. Despite the voters' growth signal, Obama doubled down on his tax/spend/regulatory (EPA) agendas in 2015 causing stocks to be range bound and volatile. As 2016 began, policy uncertainty ahead of November's elections became the biggest threat to equities. The ebb and flow of the presidential political season moved markets in both directions as investors waited to learn which policy theme would prevail in November – growth vs. redistribution. Voters decisively made their choice in Election2016, and growth won. Trump's pro-growth policy agenda beat Hillary's anti-growth policy agenda in landslide fashion. Republicans retained control of the Senate, House and increased their control of governorships by three. The policy stage is now set for Trump and Congress to keep delivering pro-growth tax, regulatory and monetary policies. As they do, a bull market in U.S. equities will ignite to rival the 1980s/90s

Egypt	EGPT	2/23/2004	\$64.00	\$29.22	-54.34%	

## POLICY MAP

Growth decreased versus last week (-.47 to -.57): Despite pro-growth tax and regulatory policy improvements since 2016, growth has tipped into negative territory over fears of a 2008-style, deflationary monetary policy mistake.

Value of US\$ decreased versus last week (-0.4 to -0.33): Dollar had been stable between gold \$1,300-\$1,375/oz, and recently strengthened to \$1,230/oz. This strong Dollar signal should give the Fed room to pause rate hikes until economic and market data calm down.

## BOND YIELD COMPONENT ANALYSIS

**Nominal Yield: 2.72% (+4%)**    **Inflation Expectation Component: 1.77% (-2%)**    **Real Growth Component: 0.95% (+4%)**

Bond market became less pessimistic about pro-growth policy outcome in 2017. After 2017 tax cut bill real growth exited the range of .30-.70 to the upside. Growth expectations are holding near 1%, while inflation expectations have drifted down over the past five years and are now below 2%. Rising growth with falling inflation is the perfect recipe for prosperity.
